

Republic of the Philippines
HOUSE OF REPRESENTATIVES
Quezon City

SIXTEENTH CONGRESS
Second Regular Session

House Bill No. 4941

Introduced by REPRESENTATIVE ARTHUR C. YAP

EXPLANATORY NOTE

In the Philippines, the corporate income tax rate is a tax collected from companies, whether domestic, resident foreign or non-resident corporation. Its amount is based on the net income companies obtain while exercising their business activity, normally during one business year. Except for certain passive incomes and incomes of domestic non-profit proprietary educational institutions and hospitals, a corporation is taxed at thirty per cent (30%) of its *taxable* income; that is, its gross income from all sources within and without the Philippines less allowable deductions. Revenues from the corporate taxes are an important source of income for the government.

The Philippines is reputed to have the highest corporate tax rates in the ASEAN region at 30%. Currently, the average rate among the ASEAN countries is around 23%. Partly due to such high corporate tax rates, many corporations resort to tax evasion.

Tax evasion is the use by the taxpayer of illegal or fraudulent means to defeat or reduce the payment of a tax, such as the deliberate failure to report taxable income or property or the deliberate reduction of income that has been received. It is punishable by law. Thus, any person or corporation who willfully neglects to file a return within the period prescribed by the National Internal Revenue Code (NIRC) or willfully files a false or fraudulent return will be liable to certain penalties. The impact on the economy of tax evasion is loss of government revenues and perverse effects on the equity and efficiency goals of the tax system.

This bill seeks to lower corporate tax rates imposed on corporations by two percent (2%) per year for the next five (5) years from its effectivity and settle at a flat rate of 20%. The primary objective of the measure is to remove the incentive for corporate taxpayers to resort to tax evasion and encourage them to voluntarily pay their tax liabilities. It is to be

accomplished without leaving any distorting effect on the government's revenue collections based on the doctrine of the Khaldun-Laffer curve.

The Khaldun-Laffer curve is a representation of the relationship between possible rates of taxation and the resulting levels of government revenues and illustrates the concept of taxable income elasticity — that taxable income will change in response to changes in the rate of taxation. It postulates that increasing tax rates beyond a certain point will be counter-productive for raising further tax revenues. Hence, the reverse proposition that decreasing tax rates down to a certain level will in fact be productive in raising tax revenues. While there may be initial losses in government revenues as a result of the proposed measure, such losses could be recovered as investments would come in and generate greater economic activities.

But more importantly, the bill is in preparation to the forthcoming ASEAN regional economic integration in compliance to the ASEAN Economic Community (AEC) Blueprint to which the Philippines is a signatory. It seeks to transform ASEAN into a single market by December 2015. In order to be competitive under such new economic order, it is imperative that the Philippines reduce its high corporate tax rates and become attractive to foreign investments.

For the foregoing reasons, the immediate consideration and passage of this bill is earnestly urged.
