First Regular Session

House Bill No. **1887**

Introduced by HON. MA. THERESA V. COLLANTES

EXPLANATORY NOTE

A practical strategy endorsed by international organizations to combat hunger and eliminate or reduce malnutrition is the enrichment of bread and bakery products with key micro-nutrients. As early as the 1940's, the internationally accepted standard for one-pound average loaf of enriched bread is that it should contain the minimum daily requirements of thiamine (B), riboflavin B2, niacin and vitamin D.

Originally, the aim of bread and bakery goods enrichment was to restore vital nutrients lost in the milling process. Today, enrichment of bread cereal products is to take advantage of bread being the basis of an integral part of modern-day diet and optimize ingestion by food of these micro nutrients by normal eating.

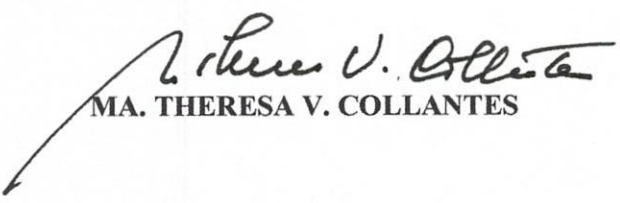

This measure aims to raise the health of our people, through optimal nutritious bread and bakery goods.

At the initiative of the baking industry itself and the Philippine Federation of Bakers Association, the industry wishes to contribute not only to health of our people, protect consumers rights, set up standards for quality baking, packaging with expiration dates, but also for the purpose of efficient management, safety during production and reasonable costs to maximize access to nutritious bread and bakery products.

The baking industry as part of the food manufacturing sector is a significant component of socio-economic development. The organization of Bakery Industry Development Board to promote health, protect consumer rights and upgrade the standards of bakeries is truly commendable.

This measure is a response to the need for improving the problem on the malnutrition of our children and youth, upgrading bakery standards and setting a momentum to accelerate economic development through the baking industry.

Approval of this measure is earnestly sought.
