AN ACT
STRENGTHENING THE NATIONAL PROGRAM FOR THE ELIMINATION OF TUBERCULOSIS,
AMENDING FOR THE PURPOSE REPUBLIC ACT NO. 10767 OR THE "COMPREHENSIVE
TUBERCULOSIS ELIMINATION PLAN ACT"

EXPLANATORY NOTE

According to the World Health Organization's (WHO) Global Tuberculosis Report 2024, TB has killed 1.25 million people across the globe in 2023, making it once again the world's leading infectious disease killer, surpassing COVID-19 from 2020 to 2022.

Likewise, the Philippines has remained among the top five countries that accounted for more than half of the tuberculosis (TB) cases in the world.¹

TB in the Philippines: A Call to Urgent Action by the Philippine Coalition Against Tuberculosis describes the sad TB situation in the country:

"The WHO Global Tuberculosis Report 2022 highlights the growing health challenge posed by tuberculosis (TB) in the Philippines: In 2021, TB incidence and deaths due to TB increased, accompanied by continued reduction in TB case notification. The Philippines contributed around 10% of the estimated global reduction in TB notification from 2019 to 2021. Of the estimated 741,000 cases of new and relapse TB cases, only 43% were diagnosed and officially reported. Most TB cases remained undiagnosed and untreated, potentially infecting more people in the community.

The Philippines is one of the 30 countries in the three global lists of high-burden countries for TB, HIV-associated TB and multidrug-resistant/rifampicin-resistant TB (MDR/RR-TB). Among the reported TB cases in 2021, only 65% were tested with rapid diagnostic tests. Xpert MTB/RIF is the most widely available rapid molecular test for TB. It can determine TB and rifampicin resistance, which is a marker for MDRTB. Use of this test is crucial for timely detection of drug-resistant TB (DRTB) cases and initiation of appropriate TB treatment.

¹ PH still among Top 5 in tally of TB cases, Dexter Cabalza, Philippine Daily Inquirer, October 31, 2024 (<https://globalnation.inquirer.net/254029/ph-still-among-top-5-in-tally-of-tb-cases>)

In 2021, only 34% of TB cases were tested for HIV, which was much lower than the 76% global coverage of HIV testing among people diagnosed with TB. All TB patients should be offered HIV testing, as provision of antiretroviral treatment is lifesaving and significantly improves TB treatment outcomes. HIV is also a known risk factor for development of MDRTB.

In 2020, the reported treatment success rate for drug-susceptible TB (DSTB) cases in the Philippines was 76% – lower than the global average of 86%. This likely reflects constraints on access to continuous health services during the pandemic and incomplete reporting of treatment outcomes from health care facilities.

Around 1.5% of new TB cases in 2021 had MDRTB...²

This bill seeks to amend Republic Act No. 10767 otherwise known as the “Comprehensive Tuberculosis Elimination Plan Act”, which was enacted in 2016 to support and expand efforts to eliminate tuberculosis as a public health problem in the country.

There is a compelling need to strengthen the landmark law in light of the Political Declaration on the Fight Against Tuberculosis (TB) which was endorsed at the UN High-Level Meeting (HLM) on TB by the heads of state and government and their representatives in 2018.

The Philippines as one of the high burden TB countries is signatory to the Political Declaration on the Fight Against Tuberculosis. At the second UN) high-level meeting in 2023, world leaders adopted a historic declaration with commitments to ambitious and comprehensive time-bound targets and actions. These targets and actions aim to enhance equitable access to TB services, protect human rights, address TB determinants, reduce vulnerability, accelerate research and innovation, and mobilize sufficient resources to support these endeavors.

The declaration builds on progress against commitments made in the 2018 political declaration of the first high-level meeting on TB. It establishes more ambitious targets and commitments to rapidly overcome the adverse impacts of the COVID-19 pandemic on TB services and fast-track progress towards the Sustainable Development Goals (SDGs).

Hence, there is a need to strengthen R.A. 10767, considered as one of the most comprehensive laws on TB in the world, in order to enable the country to keep track of its commitment to develop a national strategic plan to find and treat over millions of Filipinos with TB.

One of the recommendations of the Joint Tuberculosis Program Review 2016 is to enforce the notification of TB cases, especially on the part of private doctors. Section 12 of R.A. 10767 mandates that “All public and private health centers, hospitals and facilities shall “.... notify the DOH of all TB cases as prescribed under the Manual of Procedures of the National TB Program and the Philippine Plan of Action on Tuberculosis Control.”

Moreover, “missing TB cases” along with accessibility issues of the poor were among the key programmatic gaps that were identified in the 2016 National TB Prevalence Survey (NTPS). It reveals that “Under-reporting of TB cases to the national TB registry is likely. It shows that prevalence to notification ratio for smear-positive pulmonary TB across all ages

² <https://philcat.org/tb-in-the-philippines-a-call-to-urgent-action/> Accessed on 10 July 2025

was 3.1, with the highest ratios found in the age groups 15-24 years (4.2) and 45-54 years (3.3) and among men (3.3). One-half of those who claimed to be on anti-TB treatment at the time of the survey were not found in the national TB registry. Of those found in the TB registry, 94% cases were reported by public providers, suggesting insufficient notification and reporting from private providers.”

Given the current gaps in the program, notification of TB cases and the expansion of TB DOTS benefit package are crucial provisions in the implementation of R.A. 10767. Unfortunately, the law, while providing for notification on TB cases, does not provide for appropriate sanctions or incentives that would effectively deter non-compliance.

Hence, this proposal seeks to amend R.A. 10767 by providing fines and penalties for non-compliance to the “No prescription, No anti-TB drugs” policy and non-observance of the national protocol on TB management and TB notification. It also expands PhilHealth’s benefit package for TB patients to include TB screening, MDR TB, and XDR TB, in both adults and children.

Among the other significant features of the bill, are provisions on patients right and responsibilities, corporate social responsibility to encourage business corporations to contribute in the ongoing efforts to reduce the incidence of TB in the country; convergence of services to address the problem of indirect costs borne out of accessing TB treatment including transportation, accommodation or halfway house and meals, among others; TB Strategic Plan for local government units; and integration of TB services into established Service Delivery Networks (SDNs) or local health referral system.

Also included are provisions for personnel complement, alternative financing schemes, and other sources of funds in order to ensure sufficient and sustainable financing for the country’s commitment to end the TB epidemic.

In view of the expediency of attaining the vision of a world free of TB, the immediate approval of this measure is earnestly sought.
